## 1 Test Plan

### 1.1 Test requirements

The Lab 1 requires to (1) select **32 methods** from **6 classes** of the SUT (GeoProject), (2) design Unit test cases based on the experience or intuition for the selected methods, (3) develop test scripts to implement the test cases, (4) execute the test script on the selected methods, and (5) report the test results.

In particular, based on the statement coverage criterion, the **test requirements** for Lab 1 are to design test cases for each selected method so that *“each statement of the method will be covered by at least one test case and the minimum statement coverage is **60%**”*.

### 1.2 Strategy

To satisfy the test requirements listed in Section 1, a proposed strategy is to

- (1) select those public methods that are easy to understand and have primitive types of input and output parameters (if possible).
- (2) set the objective of the minimum statement coverage to be 50% initially and (if necessary) adjust the objective based on the time available.
- (3) learn the necessary skills and tools as soon as possible.
- (4) design the test cases for those selected methods by considering
  - i. the possible **valid values** and **combinations** of the input parameters.
  - ii. the **boundary values** of the input parameters.

### 1.3 Test activities

To implement the proposed strategy, the following activities are planned to perform.

No.	Activity Name	Plan hours	Schedule Date
1	Study GeoProject	5	3/14
2	Learn JUnit	2	3/14
3	Design test cases for the selected methods	3	3/15
4	Implement test cases	2	3/16

## 1.4 Success criteria

All test cases designed for the selected methods must pass and *the statement coverage should have achieved at least 60%.*
